 PRIMARY EXAMINER

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William Gerstenzang on November 24th, 2003.

IN THE CLAIMS

Claim 5: Insert the word "currently" before the word "amended" in the claim identifier on line 1 such that it reads: Claim 5 (currently amended).

DETAILED ACTION

Response to Amendment

1. Applicant's request for continuing examination (RCE) filed October 16th, 2003 has been entered. Claims 1,2, and 4-23 are currently pending. Claims 1,4,5,9,10,12, and 22 have been amended and claim 3 has been canceled as requested. Applicant's amendments to claims 5 and 22 along with the cancellation of claim 3 is sufficient to overcome the 35 U.S.C. 112, second paragraph rejections set forth in sections 3-6 of the last Office Action. As such, these rejections are withdrawn. Applicant's amendment to claim 1 is found sufficient to overcome the claims rejected under 35 U.S.C. 102(a) as being anticipated by Himmelsbach et al., EP 0 826 380 A2 as set forth in section 8 of the last Office Action. As such, these rejections are withdrawn. Applicant's amendments and accompanying remarks are found to patently distinguish claims 1,2, and 4-23 over the prior art of record for reasons set forth herein below.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: 1,2, and 4-23.

Applicant amended claim 1 to recite "a plurality of individual discrete domes or a plurality of individual discrete polygeometric structural forms", and further included the limitation of deforming at least some of the domes, polygeometric structural forms or at least some of each "sufficiently to cause them to contact and become attached to other domes or polygeometric forms or both, while substantially retaining the character of all of said domes and polygeometric forms as individual discrete domes or polygeometric shapes". The prior art of Himmelsbach et al., EP 0 826 380 A2 fails to teach or fairly suggest such limitations. Specifically, Himmelsbach et al., teaches applying to a backing material a partial coating of a

pressure sensitive hot melt adhesive. The pressure sensitive adhesive may be applied in the form of polygeometric domes. Himmelsbach et al., teaches that the adhesive may be applied uniformly over the backing material or the coated backing material may be subjected to calendaring however, there is no suggestion that said domes are deformed such that they retain shape. Thus, amended claim 1, and dependent claims 2 and 4-23 are now found patentably distinguishable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
